

Getting Started with Python

This document explains how to set up Python, and introduce you to Spyder, the Python Integrated Development Environment (IDE) we will be using throughout this course.

Downloading the Python Installer

- Visit the download page at (<https://www.anaconda.com/products/individual>) and click on “Download” button.

- Download Anaconda Installer according to your computer's operating system.
 - o For windows operating system, download **32-Bit Graphical Installer** if you are running 32-bit windows, and **64-Bit Graphical Installer** if you are running 64-bit windows. Here is a link to determine if you have a 32 or 64-bit operating system (<https://support.microsoft.com/en-us/help/15056/windows-32-64-bit-faq>).
 - o For Mac operating system, there is only one version of the installer (the 64-bit version), so you need to download **64-Bit Graphical Installer**.

Anaconda Installers

Windows 

Python 3.9

64-Bit Graphical Installer (594 MB)

32-Bit Graphical Installer (488 MB)

MacOS 

Python 3.9

64-Bit Graphical Installer (591 MB)

64-Bit Command Line Installer (584 MB)

64-Bit (M1) Graphical Installer (316 MB)

64-Bit (M1) Command Line Installer (305 MB)

Linux 

Python 3.9

64-Bit (x86) Installer (659 MB)

64-Bit (Power8 and Power9) Installer (367 MB)

64-Bit (AWS Graviton2 / ARM64) Installer (568 MB)

64-bit (Linux on IBM Z & LinuxONE) Installer (280 MB)

Installing Python & Spyder

After downloading the graphical installer, double click the **.exe (for windows)** or **.pkg (for Mac)** file and follow the instructions on the screen. When installing Anaconda, a pop-up menu may ask whether or not to “Add Anaconda3 to my PATH environment variable”, and “Register Anaconda3 as my default Python 3.9.” Accept both options and install Anaconda.

Starting Spyder

Spyder is an Integrated Development Environment (IDE) useful for writing, running and debugging codes. It is one of the tools (along with several other tools related to Python development) available with the Anaconda distribution of Python. To access and open Spyder, you can open “**Anaconda Navigator (Anaconda3)**” from the start menu (in windows only) and launch **Spyder** from the tools available in Anaconda Navigator.

You can also open **Spyder** by directly searching for it in the start menu (Windows only).

Once you open the Spyder application, you should see the following window.

The left part is the Code Editor that lets you create and edit existing Python source files, and the “IPython interpreter pane” in the right part of the Spyder application gives you access to the Python interactive mode.

You are now ready to write and run your first Python program using Spyder.
